1. A proactive operating environment that includes a group of proactive servers communicating over a network; each proactive server (PS₁) comprising:

Ting page to the Albard Control of Salar Control of Salar

ទី១៥នៃ ខែជា ហ៊ុំ

a storage that includes a non erasable part that stores at least a public, non proactive related, key V^I_{start} ; said storage further includes an erasable part for storing private and public data; said proactive server is further associated with a discardable one-time private key S^I_{start} that corresponds to said public key V^I_{start} ; said proactive server is further associated with configuration data C_i

a processor for providing at least proactive services to applications;

the proactive server is associated with a group public proactive key V_{CERT} common to said group of proactive servers and a share S_{CERT} of a corresponding private proactive key S_{CERT} ;

the processor is operative to invoke initialization procedure for generating restore related information;

the processor is further operative to invoke a restore procedure for utilizing at least said public, non proactive related, key V_{start} and said restore related information for restoring at least said public proactive key V_{CSRT} .

or, responsible to the first

2. The system according to Claim 1, wherein said restore procedure is invoked by refresh procedure.

	FUT WAS INCIDENT OF THE PROPERTY OF THE PROPER
10	(1i-1,i+1n) in the group, so as to authenticate
11	and encrypt the network channel;
12	(iv) the processor generating the group public
13	proactive key V_{Cert} and a share (S^{I} CERT) of
14	corresponding private proactive key Scer;
15	(v) the processor generating restore related self
16	information that includes $M_{I} = S^{I}_{start}$ (V_{cert} , C).
17	(vi) discarding the one-time private key S'start;
18	(vii) broadcasting $M_{\rm I}$ to all servers in the group,
19	and receiving My from all respective SPy servers in
20	the group; the processor concatenating said M_1M_N so
21	as to constrct M;
22	(viii) the processor generating a joint signature
23	(Scert (M), M) that forms part of said restore related
24	others' information; and
25	(ix) broadcasting the joint signature (S_{cert}
26	(M),M).
1	10. The system according to Claim 1, wherein
2	said recover procedure includes:
3	(i) the processor extracting V start;
4	(ii) the processor extracting M_I from M_i
5	(iii) the processor constructing V _{cert} by applying
6	V^{I}_{start} to M_{I} ,
7	(iv) the processor validating M by applying V_{CERT}
8	to the joint signature part $(S_{Cert} (M); if the result$
· 9	matches M then the server becomes operational; sending
10	M and S_{cert} (M) to all the group servers; (v) if, on the other hand, M is invalid, then
11	
12	waiting the receipt of another joint signature and
1 73	in recorded reposition said Gilli FA: (1V)
